## WM-610 *LTE Remote Monitoring System*

**Waterloo Manufacturing would like to introduce the WM-610 RMS**

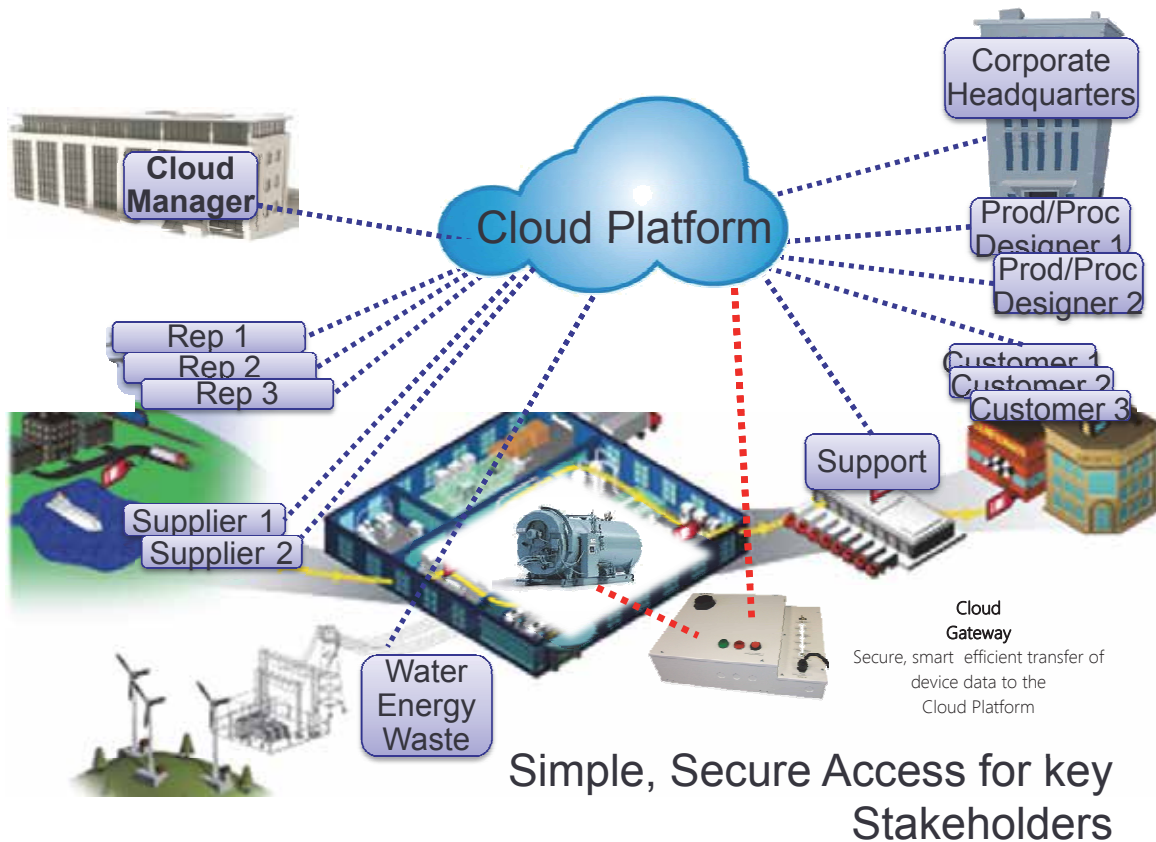

Utilizing 10 universal inputs the 610 will remotely monitor any device, system or function. There is no need to connect to a LAN or any IT infrastructure. The system is completely independent as it communicates over a cellular network. If faults are detected the unit will transmit an e-mail, an SMS text message or both to a pre-determined set of recipients. The Web based interface allows for remote access and real time viewing, manipulation and control of a system's functionality, settings, statuses, peripherals and access to trending data. The 610 is easily configured for use over the Internet using any web browser.

Easily configured, the 610 is factory programmed for use with a wide range of sensors, including but not limited to; Temperature, Pressure, Humidity, Dewpoint, Current, Flow Rate and Fluid Level. Additionally direct device to device inputs are accepted. These inputs are monitored 24 hours per day, seven days per week, 365 days per year. An onboard "Page" or "Call for Service" button notifies service personnel instantaneously, should it be required. The 610 monitors operational time and alerts service personnel when regular maintenance is required, but also maps trend data which can either be viewed graphically or downloaded to an Excel Spreadsheet for further analysis. The WM-610 has five optional onboard outputs which provide remote control functionality for the unit or peripheral devices.

Communication to and from the 610 is provided over a cellular 3G or LTE\* network eliminating the requirement for a wired connection to a LAN. Simple to configure and install, factory programmed, versatile and powerful, the WM-610 provides real-time monitoring at a cost-effective price. For more detail on the 610 please contact the Waterloo Manufacturing Sales team.

## How do I see my data?

- Cloud based dashboard you access over any internet connection using your web browser.
- No other software required.
