Long Term Energy Savings with very short Return on Investment...

Energy savings is a common query that we have been receiving requests about in the last few years. As the costs of fuel and electricity rise and remain at higher levels this is becoming increasingly important to your bottom line. We are able to respond to your needs in multiple ways including, new higher efficiency boiler room equipment, advanced control systems, retrofit burner replacements, economizers, implementing monitoring equipment as well as annual service and preventative maintenance contracts. One or more of the above will provide efficiency gains in the energy consumption of your boiler plant. While some of these initiatives do require a capital investment, there is a quick return on investment with long term savings in energy costs as the end result for the customer.

Cleaver Brooks has been the leader in boiler room solutions for over 80 years and today has the most comprehensive product line in the industry. Solutions for all areas of the boiler plant from 400,000 BTUs up to 500,000 "lb/hour" of steam; feedwater systems; heat recovery; exhaust solutions; high efficiency burners and advanced control systems, all engineered and designed to be packaged together to provide a single source solution.

Waterloo Manufacturing has been working with Cleaver Brooks since 1947 providing sales and service in South-western Ontario. We offer genuine Cleaver Brooks parts, factory trained and licensed service technicians, as well as

knowledge and experience to select the equipment best suited to your application.

Cleaver Brooks and Waterloo Manufacturing together provide a single source solution for all aspects of any boiler project. We can support the customer from the planning stages through the entire life of the boiler. We are able to provide engineered solutions to enhance or retrofit the equipment as new energy savings technologies arise or as government legislation changes with regards to emissions standards.

The past few years Cleaver Brooks R&D has been quite active and the result is new technologies offering the highest efficiencies, low emissions and keeping in mind the smaller boiler footprint required in new building designs. New technologies include the CBEX Firtube from 100-2200 HP, CFLC condensing boiler from 4 MBTUs to 12 MBTUs, Flextube boiler up to 25 MBTUs, Hawk 1000 and 4000 advanced control systems, as well with retrofit burners such as the MTH. Both Cleaver Brooks and Waterloo Manufacturing are committed to being the leading solutions provider in the industry.

For additional information on any of the products or services mentioned in this newsletter our contact information is listed on the reverse of the newsletter. We would be more than happy to provide Information Sessions or Lunch & Learns, at your convenience.

CleaverBrooks®

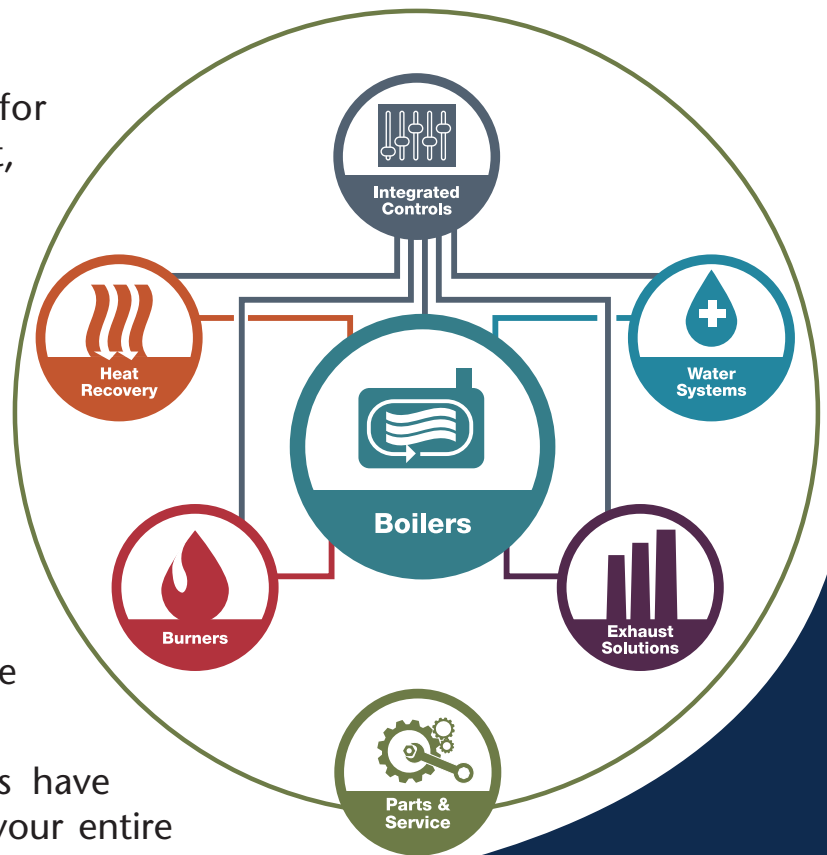

sets the Bar for Low-Emissions Products in your Boiler Room.

Cleaver-Brooks sets the bar for industry-leading, energy-efficient, low-emissions products for your boiler room.

Whether it's a new boiler installation, from the smallest electric commercial boiler to the largest industrial boiler, or retrofitting your current facility, Cleaver-Brooks fully integrated systems, including boilers, burners, controls and auxiliary equipment, supply the most efficient solutions in the world.

Only Cleaver-Brooks boiler systems have the power of total integration for your entire boiler room, built in from the ground up.
